

- Register as member of a national users group within the ELRI infrastructure.
- Upload translation memories or documents in different languages to the National Relay Station in your Member State.
- Specify your resource sharing conditions at the national, European and/or community level.
- Let automated processing prepare valid translation resources.
- Retrieve translation memories created from your resources or existing ones available to your group.

European Language Resource Infrastructure

Co-financed by the European Union
Connecting Europe Facility

The sole responsibility of this publication lies with the author. The European Union is not responsible for any use that may be made of the information contained therein.

Objectives

The European Language Resource Infrastructure (ELRI) project is an initiative co-funded by the European Union under the Connecting Europe Facility (CEF) programme.

The main objective of ELRI is the provision of an infrastructure to help collect, prepare and share language resources that can in turn improve translation services. In particular, resources shared with the DGT will contribute to improve the EU automated translation services that are freely available to all public institutions.

The initiative notably addresses current issues related to sharing resources directly at the European level or beyond, by providing national public relay stations where resources remain under member states' laws and regulations until further clearance is negotiated and granted.

ELRI targets resources that are relevant to Digital Service Infrastructures and involves public institutions and public translation centres in France, Ireland, Portugal and Spain as a first step, with a future extension to additional member states as a key objective.

Benefits

ELRI provides the following main benefits:

- ❑ The provision of separate data sharing layers establishes a clear process where compliance with the relevant sharing restrictions can be established at every step.
- ❑ Raw language resources are converted automatically into a format useful for translation experts as well as machine translation infrastructures.
- ❑ Data sharing with ELRI provides broad compliance verification covering Intellectual Property Rights, the Public Sector Information Directive and DSI-specific needs.
- ❑ Language resources can be shared as deemed appropriate by stakeholders, with return benefits for providers as well as users of translation services.

Milestones
